

# **SELECTIVE CALL RING**

## **How it helps you**

- Selective Call Ring is a feature that allows customers to easily distinguish “important” or “preferred” callers from all other callers by enabling a stutter-ring. The call waiting prompt is also distinct from normal call waiting.
- Calls from numbers on your Selective Call Ring list will have a short/long/short ring, letting you know that this call is special.
- Selective Call Ring is FREE with your subscription to Blue Ridge Digital Phone.

## **How it works**

- To program a number: Listen for a dial tone. Press \*61. Then press # and wait for the tone. Enter the selected phone number. Press # again and hang up.
- To add the number of the last incoming call to your list: Listen for the dial tone. Press \*61. Then press #01# and hang up.
- To activate or de-activate the feature: Listen for the dial tone. Press \*61. Listen to the ON/OFF announcement. To turn the feature on or off, press or dial 3.
- To remove or hear the phone numbers on your list: Listen for the dial tone. Press \*61 and listen for instructions.

## **Helpful Hints**

- You’ll hear the same distinctive ring for all numbers on your list.
- Calls from numbers on your Selective Call Ring list will also give you a short/long/short Call Waiting tone.
- Up to 12 Selective Call Ring numbers can be registered.
- Some cordless phones generate their own unique rings. These phones are not compatible with Selective Call Ring.
