9 Updated Thermostat Scheduler and Interface	11
10 Touchstone Activation via Mobile App	13

1 Summary

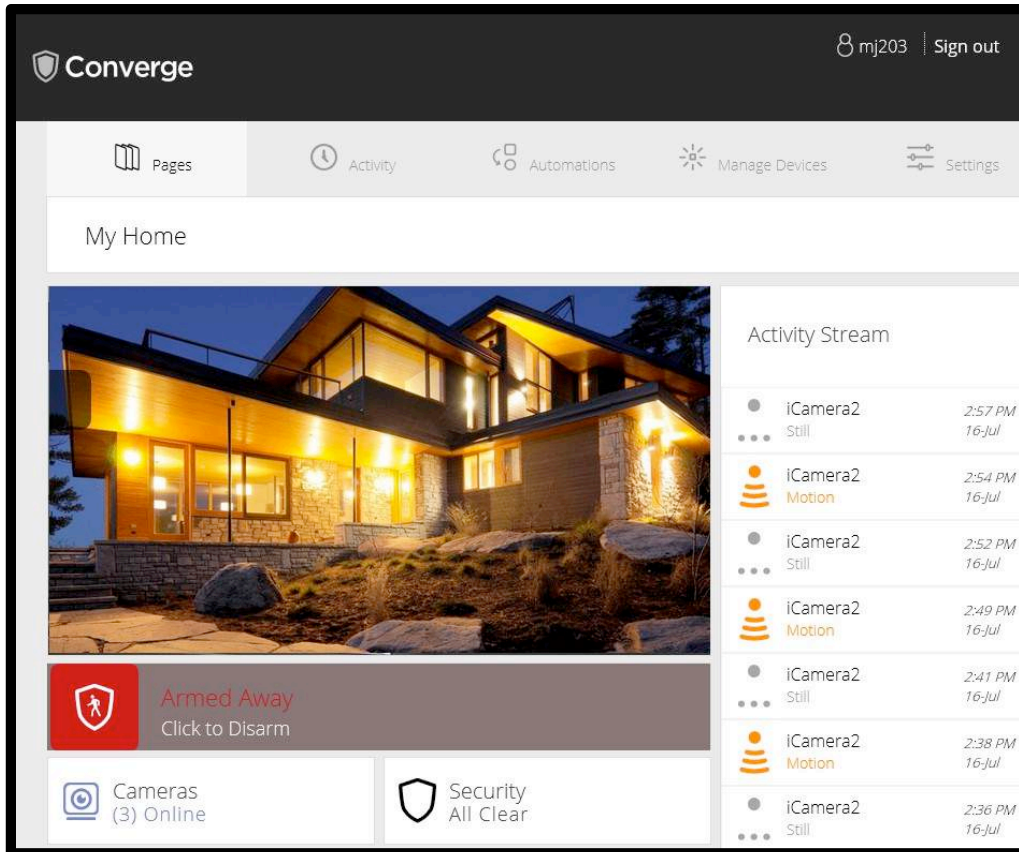

Welcome to the Oahu release! This release includes the new [Card UI Web App](#) and updates to the Card UI Mobile App:

- ❑ [Updated Navigation](#) - Navigation menu on the Mobile App has moved to the bottom of the screen
- ❑ [Customizable Pages](#) - Used to configure the apps
- ❑ [Activity](#) - Includes a clickable calendar and additional event filters
- ❑ [Automations](#) - Replaces "Rules" and includes a new automations wizard
- ❑ [Keypad Access Code Management](#) - New layout for the Web App and access via the Mobile App
- ❑ [Account Information and Status](#) - New layout for the Web App and access via the Mobile App
- ❑ [Trusted Circle Contact Management](#) - New layout for emergency and non-emergency contacts
- ❑ [Card UI First Time User Experience \(FTUE\)](#) - In-app product tutorials for the Mobile App and the Web App
- ❑ [Cloud Integration Support](#) - Support for selected third-party cloud devices has been added to the Cloud Actions and Triggers (CAT) market trial
- ❑ [Updated Thermostat Scheduler and Interface](#) - Improvements to the thermostat scheduler and thermostat user interface based on usability findings
- ❑ [Touchstone Activation via Mobile App](#) - Users can activate via the Mobile App or via the browser using the Web App

No new features are available for previously released versions of the "classic" Icontrol Mobile App, but selected versions will continue to be supported and made available until further notice.

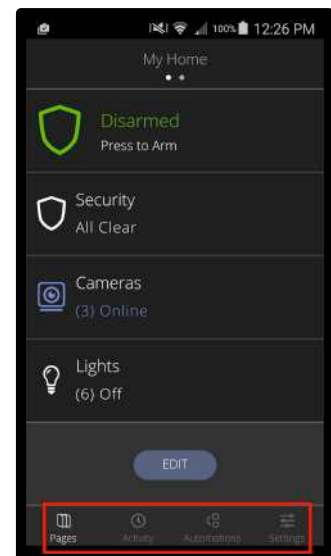

2 New Card UI Web App

The Web App is the new browser interface that will replace the "classic" Icontrol Subscriber Portal. The classic Subscriber Portal is still available, however it will no longer be updated with new features or fixes.

3 Updated Navigation

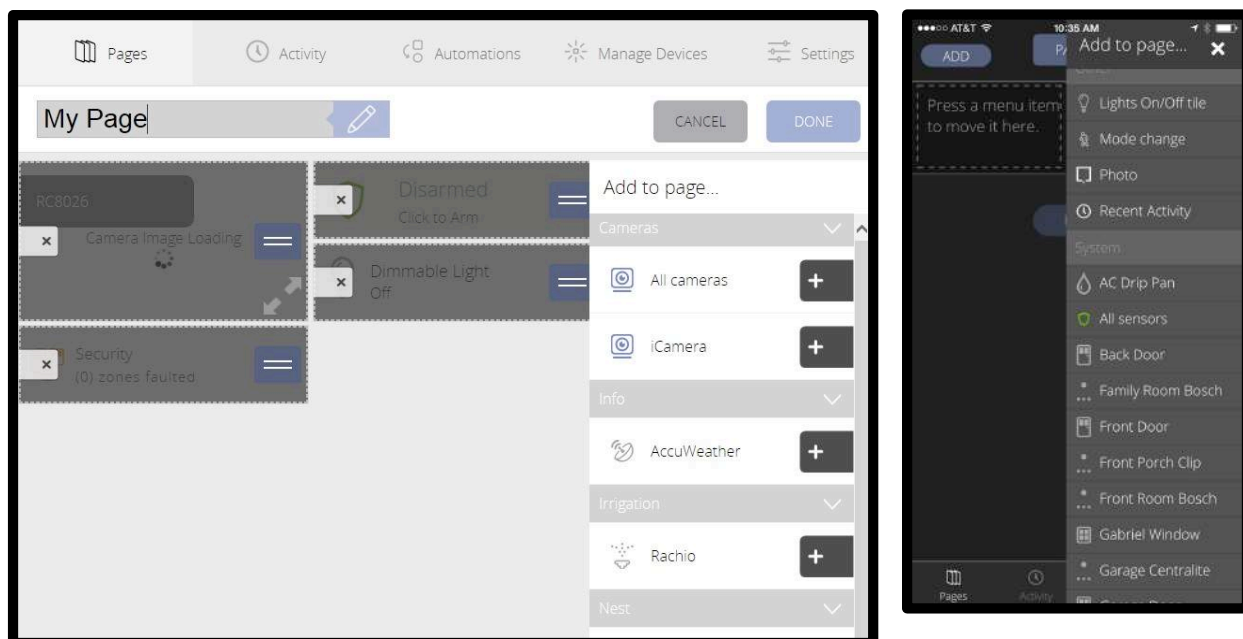

The views on the Mobile App (Pages, Activity, Automations, and Settings) can be accessed from the bottom of the screen. The user can tap the icon for each view to navigate between views. On the Mobile App, the Manage Devices screen can be accessed by navigating to **Settings > Manage Devices**.

4 Pages

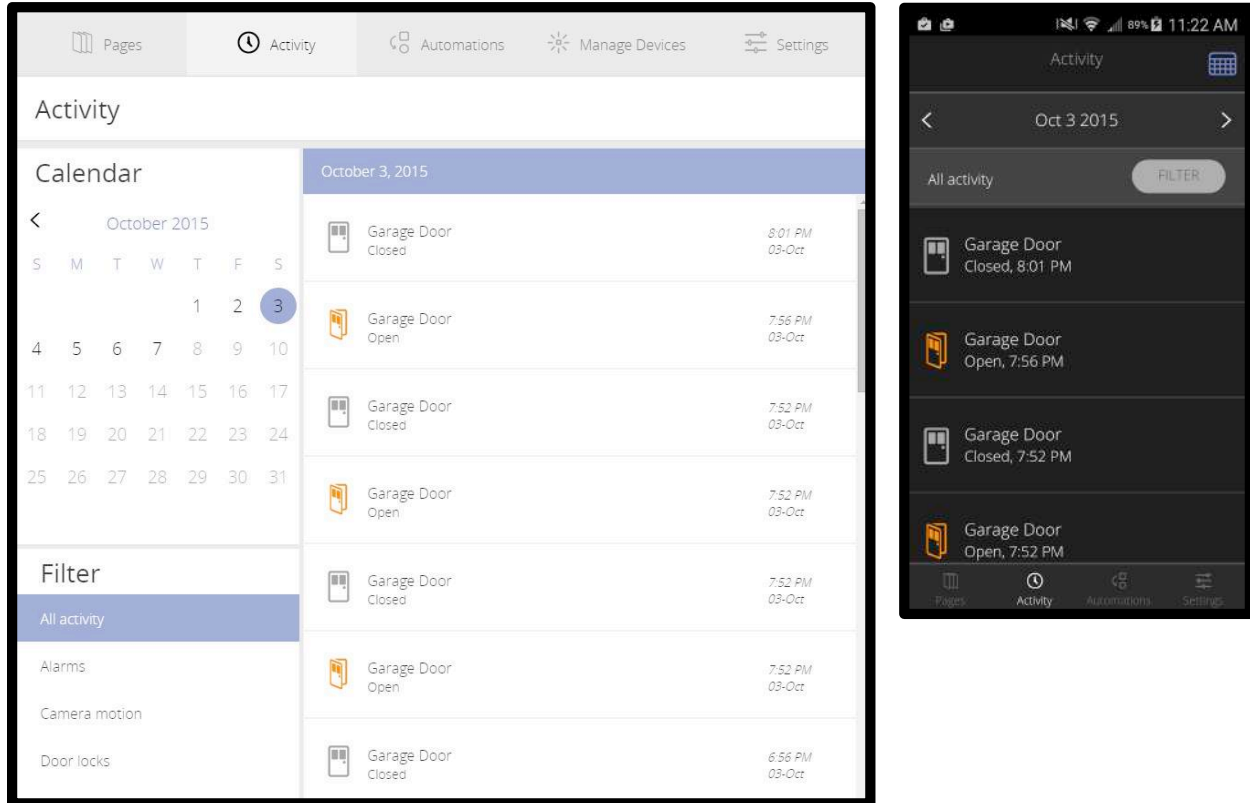

The Card UI Web and Mobile App interfaces are made up of pages and tiles. Each device and group of devices is represented as a tile. The user can modify the default My Home page or create additional pages and add tiles to customize the user interface. Tiles can be used on multiple pages. Pages created are local to the app they are created in; they do not propagate to the apps in other browsers or mobile devices.

In the Web App, pages can be created by hovering over the **Pages** menu at the top of the screen and selecting **Page [x]** from the drop-down menu. In the Mobile App, pages can be created by swiping left in the Pages view to the next blank page (Page [x]). In both the Web App and the Mobile App, pages can be modified by clicking/tapping the **Edit** button at the bottom of a page or by navigating to **Settings > Pages**.

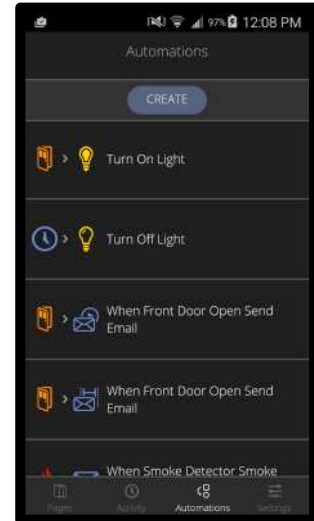

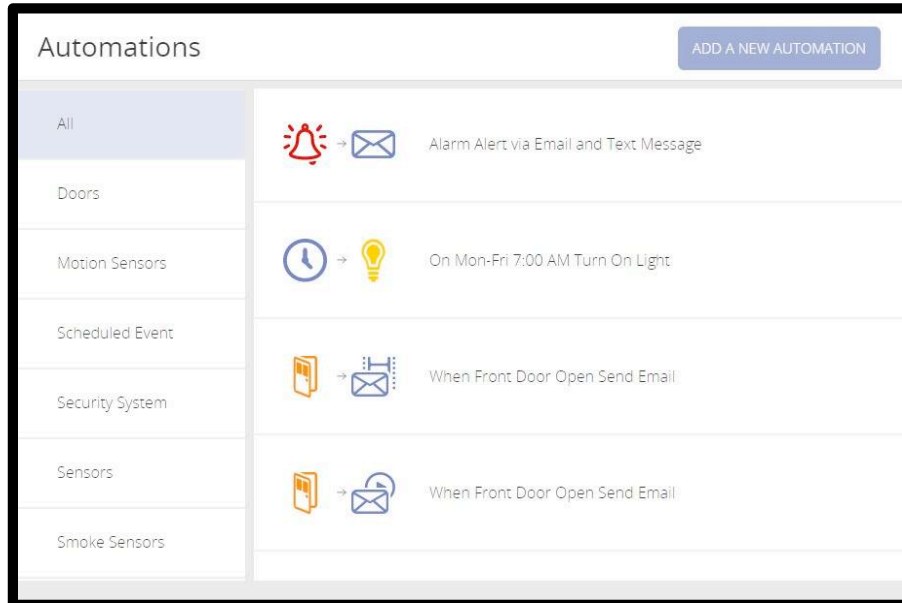

5 Activity

The classic Subscriber Portal "History" has been renamed to "Activity" and updated to include a clickable calendar. All activity is displayed by default, and additional filters assist the user in sorting through events.

6 Automations

The classic Subscriber Portal "Rules" has been renamed to "Automations" and updated to include an "Add a New Automation" wizard and a filter based on the automations event on the Web App, and a "Create" wizard on the Mobile App. The ability to edit, delete, enable, and disable individual automations remains. Automations created or modified in any app can be accessed from all other apps logging in to the account.

7 Settings

7.1 Keypad Access Code Management

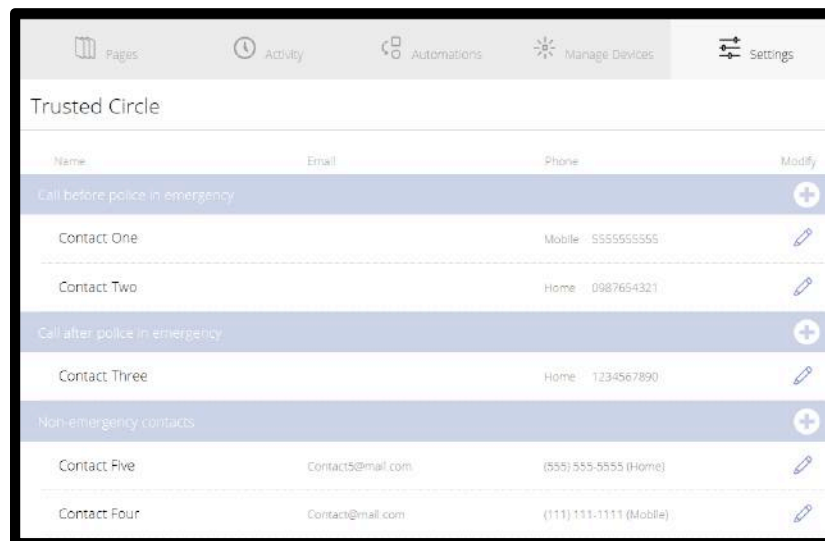

For Converge users, the ability to add, edit, and delete access codes to arm and disarm the security system has been added to the Mobile App, and the layout has been updated on the Web App. The screen can be accessed by navigating to **Settings > Keypad Codes**. The user can add a new keypad access code and edit or delete an existing access code.

7.2 Account Information and Status

Account information, such as username, premise address, time zone, and quotas can be accessed by navigating to **Settings > Account**. If the service provider allows, the user can change the username and password of the account from this screen. Converge users with monitored accounts can also edit the Secret Word and the Alarm Ordinance and Permit Registration of the security system from this screen. No other information can be changed, as it is for informational purposes only.

7.3 Trusted Circle Contact Management

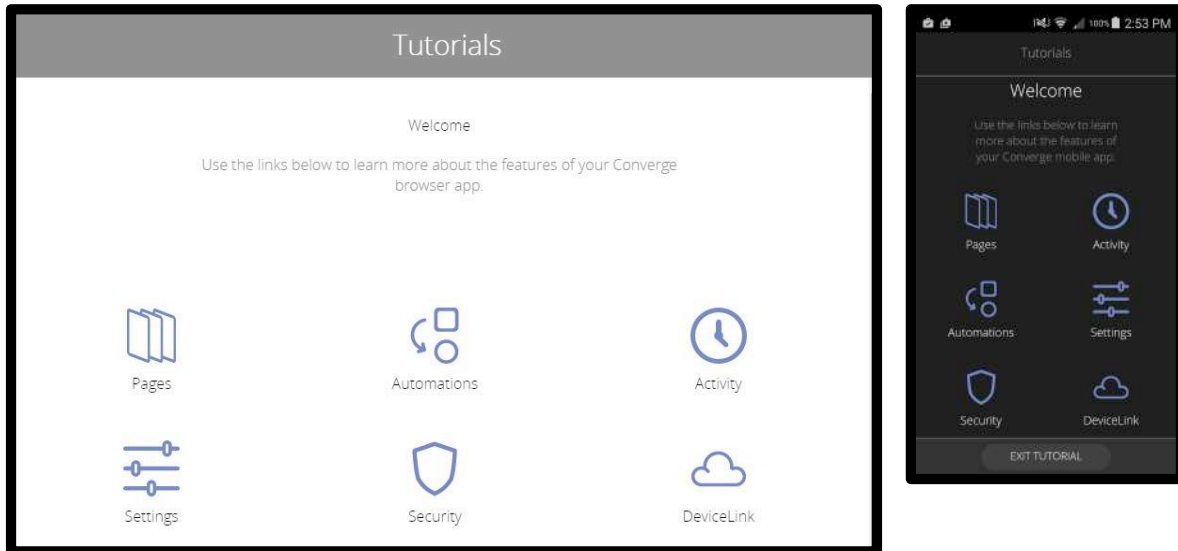

"Trusted Circle", which consists of emergency and non-emergency contacts, can be accessed by navigating to **Settings > Trusted Circle**. Emergency contacts are those that will be contacted by the central monitoring station when an alarm is triggered and are applicable to Converge users only. Non-emergency contacts are those that will be notified when an automation is run and are applicable to both Converge and Touchstone users. The user can add a new contact by clicking  on the appropriate heading, and can modify the information of current contacts or delete a contact in either group by clicking  .

Name	Email	Phone	Modify
Call before police in emergency 			
Contact One		Mobile: 5555555555	
Contact Two		Home: 0987654321	
Call after police in emergency 			
Contact Three		Home: 1234567890	
Non-emergency contacts 			
Contact Five	Contact5@mail.com	(555) 555-5555 (Home)	
Contact Four	Contact@mail.com	(111) 111-1111 (Mobile)	

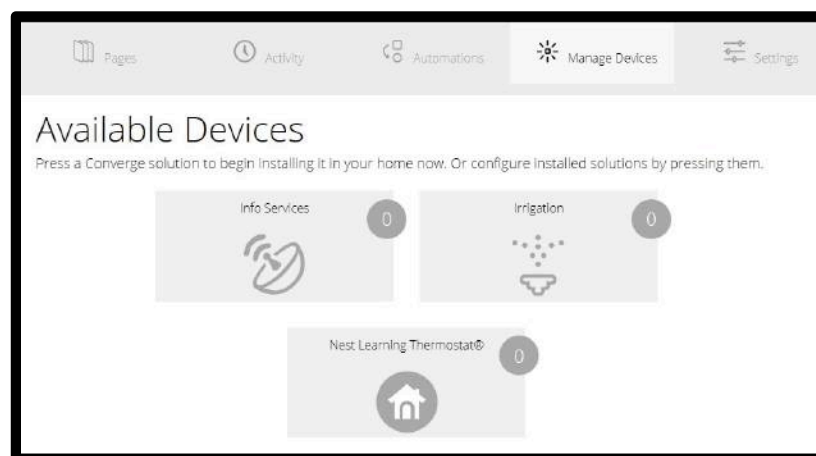

7.4 First Time User Experience (FTUE) - Card UI Product Tutorials

A product tour guides new Card UI users on how to use and configure the Mobile App and the Web App. Users can also access the product tutorials by navigating to **Settings > Tutorials**. The link for each feature (Pages, Activity, etc.) opens a slide show with information about that feature.

8 Cloud Integration Support

Cloud Actions and Triggers (CAT) is fully functional and ready for market trial. Cloud integration bridges are available for Nest Learning Thermostats, Rachio Smart Sprinkler Controllers, and AccuWeather service. They can be integrated into the Icontrol platform via the **Manage Devices** view in the Web App or by navigating to **Settings > Manage Devices** in the Mobile App. Contact Icontrol Professional Services for implementation guidance.

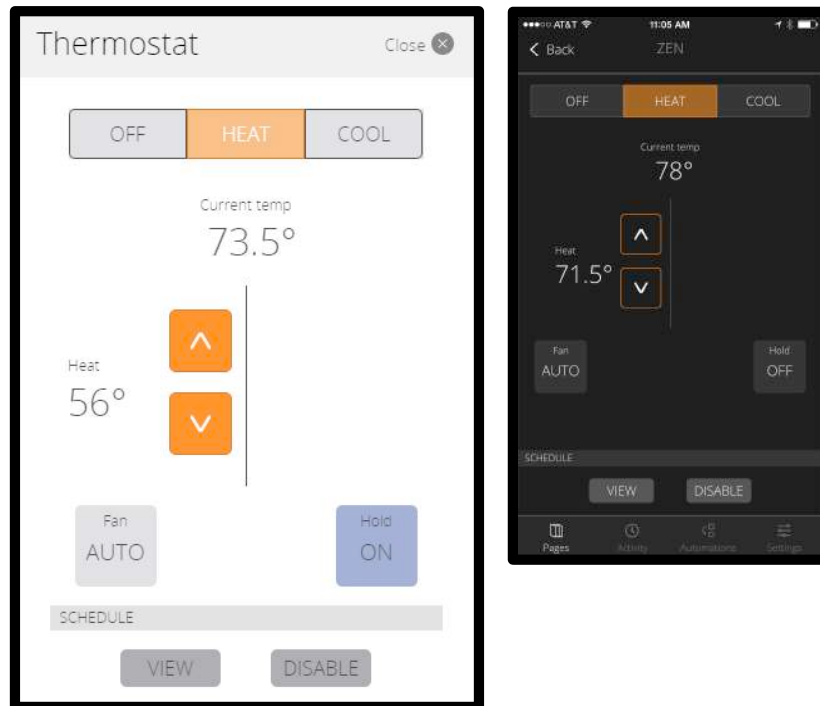

9 Updated Thermostat Scheduler and Interface

Several improvements have been made to the thermostat scheduler and the thermostat user interface based on usability findings, as described in the following sections.

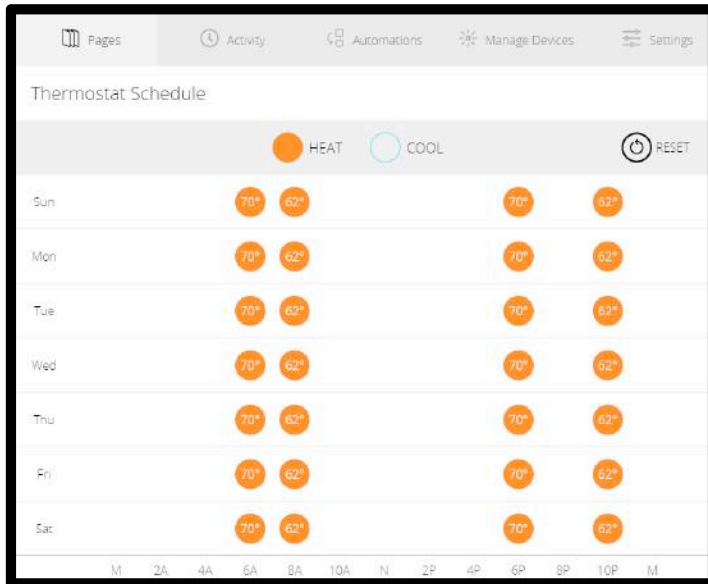

9.1 Thermostat User Interface

The user can access the thermostat from a tile on the Pages view and adjust the current temperature settings (heat or cool) using the up/down arrows.

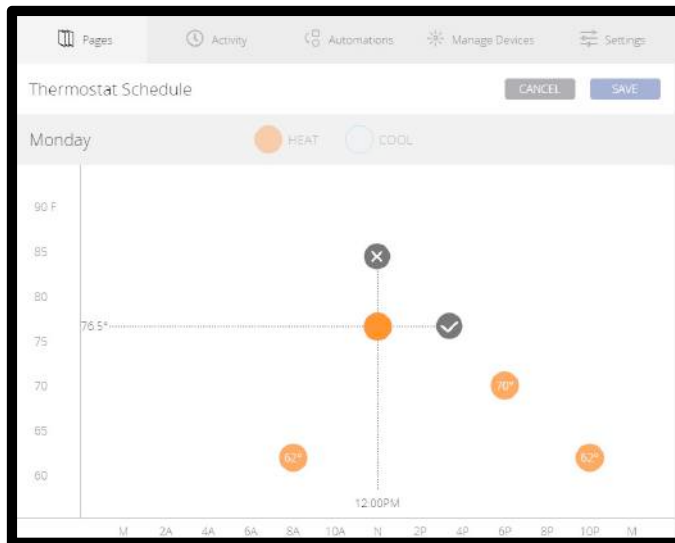

9.2 Thermostat Scheduler

From the thermostat interface, the user can access the thermostat schedule, choose a day to adjust the heat/cool settings, and then use the time/temperature grid to program temperatures for specific times during that day.

In the time/temperature grid, the user can click/tap to add a new setting and then click/tap and drag to move the "bubble" to the desired time/temperature coordinates.

10 Touchstone Activation via Mobile App

In previous releases, the Touchstone user could access the account via the Mobile App only after the hub had been activated via a browser. In the 7.1 Oahu Mobile App release, the Touchstone user can log in to the Mobile App with the temporary username and password provided in the activation email and activate the Touchstone hub. Activation can still be done via the browser using the Web App.

11 Operational Impact Assessment

The Card UI Web App and Mobile App have the following operational impact:

- ❑ New design and layout for users provides additional functionality on mobile and tablet.
- ❑ Users can customize their home page and create additional custom pages to view and interact with their home system.

Starting with the 7.1 Oahu release, the Web App will replace the “classic” Icontrol Subscriber Portal. The classic Subscriber Portal is still available, however it will no longer be updated with new features or fixes.
